a lateral metal-oxide semiconductor field effect transistor (MOSFET), including:

a silicon carbide tub located within a trench formed in a conductive substrate;

a gate formed on the silicon carbide tub; and

source and drain regions located in the silicon carbide tub and laterally offset from the gate; and

a complimentary metal-oxide semiconductor (CMOS) device formed on the conductive substrate, the CMOS device having a tub comprising a material different from the silicon carbide tub.

- (2) Please cancel Claim 48 without prejudice or disclaimer.
- (3) Please add new Claim 54 as follows:
- -54. (New) A semiconductor device, comprising:
- a lateral metal-oxide semiconductor field effect transistor (MOSFET), including:
 - a silicon carbide tub located within or contacting a conductive substrate;
 - a gate formed on the silicon carbide tub; and

source and drain regions located in the silicon carbide tub and laterally offset from the gate; and

a complimentary metal-oxide semiconductor (CMOS) device formed on the conductive substrate, the CMOS device having a tub comprising a material different from the silicon carbide tub, and wherein the conductive substrate includes a buried oxide layer formed therein.--
